EUROPEAN PATENT APPLICATION

⑬ Application number: 88306867.8

⑮ Int. Cl. 5 D04H 1/56 , D04H 1/72 ,
D04H 1/00

⑭ Date of filing: 26.07.88

⑯ Priority: 29.07.87 US 79312

⑰ Applicant: ARCO CHEMICAL TECHNOLOGY
INC.
3 Christina Centre Suite 902 201 N Walnut
Street
Wilmington Delaware 19801(US)

⑰ Date of publication of application:
01.02.89 Bulletin 89/05

⑰ Inventor: Bourland, Larry G.
850 Dowlin Forge Road
Downington Pennsylvania 19335(US)
Inventor: DiLullo, Robert J.
229 Vincent Road
Paoli Pennsylvania 19301(US)
Inventor: Ritrievi, Kimberly E.
250 West 89th Street Apt. 12-K
New York New York 10024(US)
Inventor: Valbert, Jon R.
100 Arbor Place
Bryn Mawr Pennsylvania 19010(US)

⑰ Designated Contracting States:
BE DE ES FR GB IT NL

⑰ Representative: Cropp, John Anthony David et
al
MATHYS & SQUIRE 10 Fleet Street
London, EC4Y 1AY(GB)

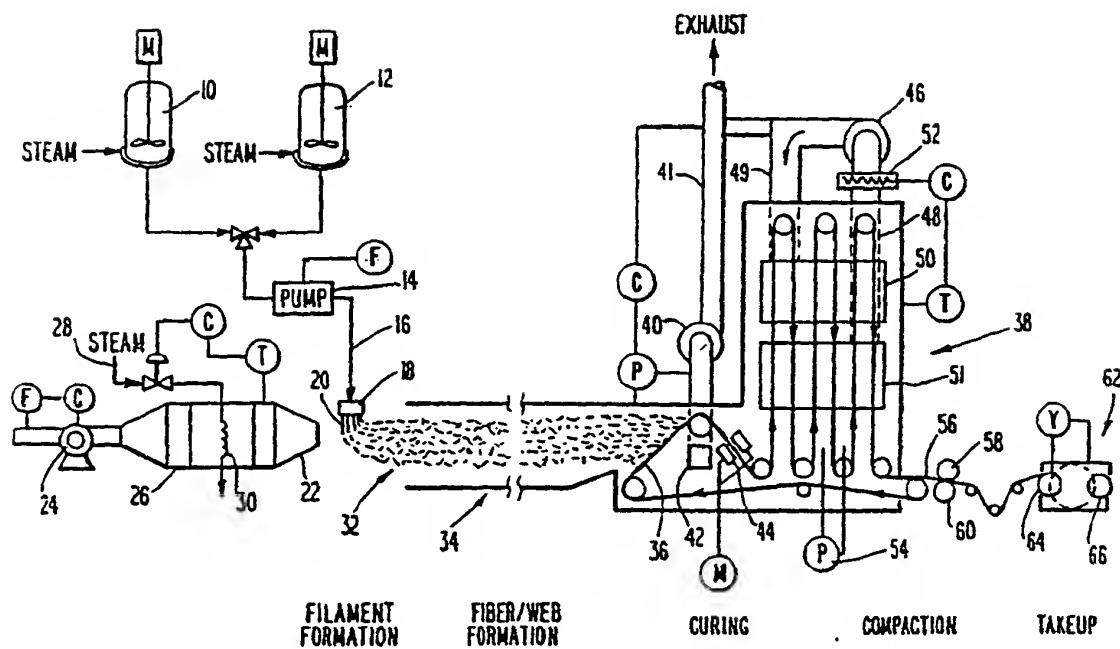

⑰ Date of deferred publication of the search report:
09.05.90 Bulletin 90/19

⑯ Method and apparatus for production of nonwoven fibrous articles.

⑯ Superabsorbent articles in the form of soft, non-woven fibrous webs are produced from aqueous, fiber-forming polymer solutions by forming the polymer into water soluble filaments in die 18, contacting the filaments with a primary air stream having a velocity effective to attenuate and to partially dry the filaments, contacting the attenuated filaments with a secondary air stream from nozzle 22 having a velocity effective to fragment the filaments into fibers and to transport the fibers to a web-forming zone 32

while also further attenuating and drying the fibers, collecting the fibers in reticulated web-form in the web-forming zone and curing the web in oven 38 to a water insoluble state. The temperature and air stream velocities are controlled with respect to ambient humidity and water content of the fiber during the fiber and web formation such that the fibers are collected without sticking. Collection is preferably on a wire belt 36 followed by transport through a curing oven to compacting rolls 58,60 and web take-up 64.
